fast	faster

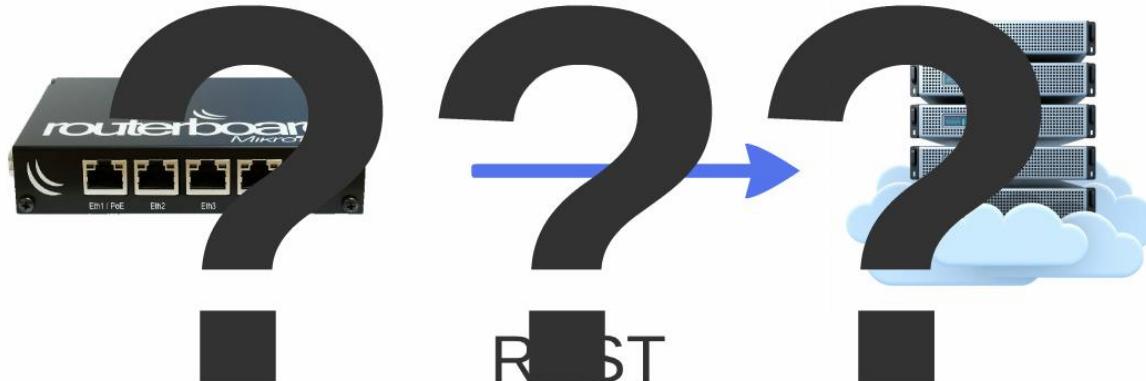

REST ?

REST ?

Representational State Transfer

REST is an architectural style, and an approach to communications that is often used in the development of Web services. Which typically runs over HTTP (Hypertext Transfer Protocol).

`/tool fetch`

/tool fetch

Fetch is one of the console tools in Mikrotik RouterOS. It is used to copy files from any network device to a Mikrotik router via HTTP or FTP.

In latest v5 versions it is possible also to upload files to remote locations.

Fetch now supports HTTPS protocol. By default no certificate checks are made, but setting check-certificate to yes enables trust chain validation from local certificate store.

The following example shows how to copy the file with filename "conf.rsc" from device with ip address 192.168.88.2 by FTP protocol and save it as file with filename "123.rsc". User and password are needed to login into the device.

```
[admin@mt-test] /tool> fetch address=192.168.88.2 src-path=conf.rsc \
user=admin mode=ftp password=123 dst-path=123.rsc port=21 \
host="" keep-result=yes
```

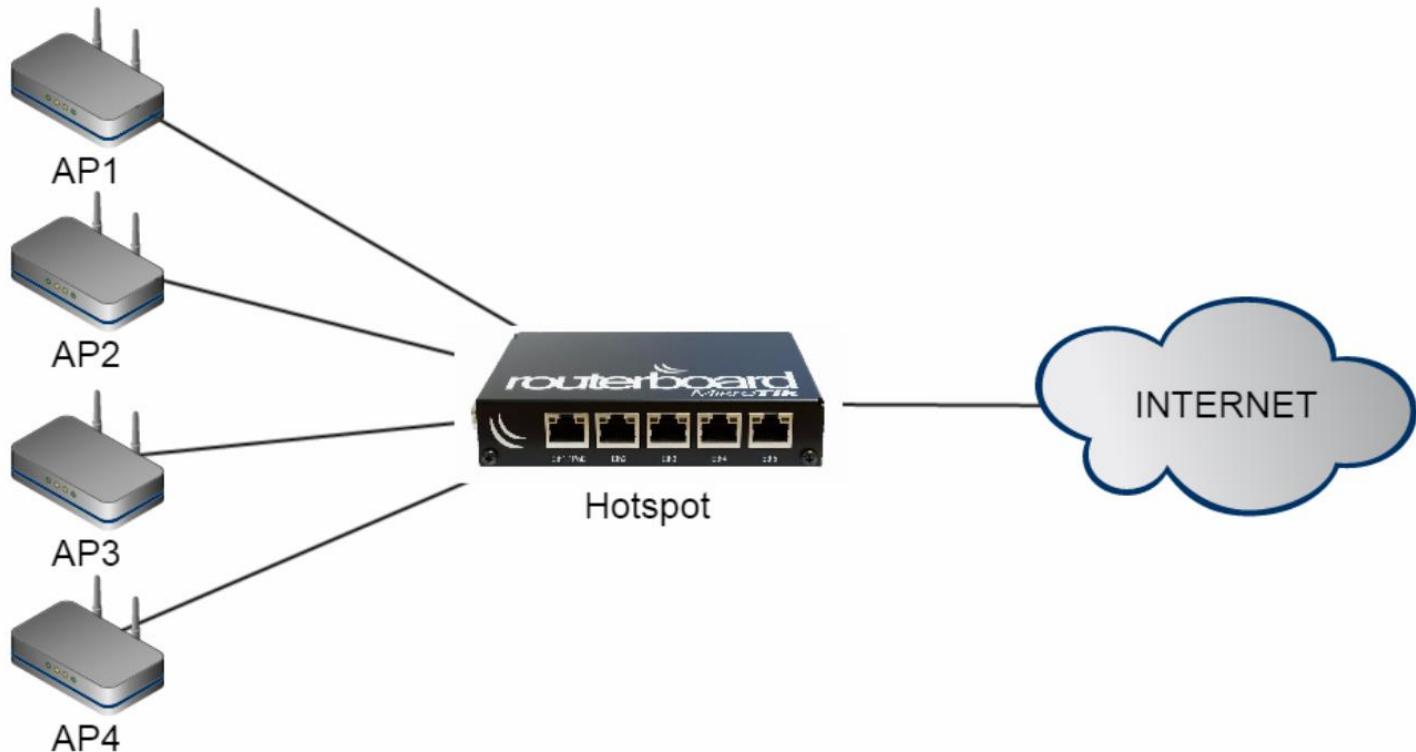

The following example shows how to copy the file with filename "conf.rsc" from device with ip address 192.168.88.2 by FTP protocol and save it as file with filename "123.rsc". User and password are needed to login into the device.

```
[admin@mt-test] /tool> fetch address=192.168.88.2 src-path=conf.rsc \
user=admin mode=ftp password=123 dst-path=123.rsc port=21 \
host="" keep-result=yes
```

example that demonstrates the usage of url property.

```
[admin@test_host] /> /tool fetch url="http://www.mikrotik.com/img/netaddresses2.pdf" \
mode=http
status: finished
```

Network Diagram

Netwatch

Netwatch

The screenshot shows the Netwatch application window. At the top, there is a toolbar with icons for adding (+), deleting (-), selecting (checkmark), filtering (magnifying glass), and a search bar labeled "Find". Below the toolbar is a table with columns: Host, Interval, Timeout (...), Status, and Since. The table lists four hosts: AP1 (192.168.11.11), AP2 (192.168.11.12), AP3 (192.168.11.21), and AP4 (192.168.11.22). Each entry includes an icon indicating its status (green for up) and the last update time (Aug/30/2015). At the bottom left, there is a navigation bar with arrows and a message "4 items".

Host	Interval	Timeout (...)	Status	Since
:: AP1 ◆ 192.168.11.11	00:10:00	1000	up	Aug/30/2015
:: AP2 ◆ 192.168.11.12	00:10:00	1000	up	Aug/30/2015
:: AP3 ◆ 192.168.11.21	00:10:00	1000	up	Aug/30/2015
:: AP4 ◆ 192.168.11.22	00:10:00	1000	up	Aug/30/2015

Netwatch Script

On Up:

```
/tool fetch url="http://mikrotikthai.com/mkt_alarm.php?msg=AP1_192.168.11.11_Up" mode=http keep-result=no;
```

On Down:

```
/tool fetch url="http://mikrotikthai.com/mkt_alarm.php?msg=AP1_192.168.11.11_Down" mode=http keep-result=no;
```

Server Side Script *(Facebook API)*

```
<?php
    require('facebook.php');
    $acctoken = 'xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxx';
    $config = array(
        'appId' => 'xxxxxxxxxxxxxxxxxxxxxx',
        'secret' => 'xxxxxxxxxxxxxxxxxxxxxxxxxxxxxx',
        'fileUpload' => false,
    );
    if(isset($_GET['msg']) && ($_GET['msg'] != ""))
    {
        $fb = new Facebook($config);
        $params = array(
            "access_token" => $acctoken,
            "message" => $_GET['msg'],
        );
        try {
            $ret = $fb->api('/<fb_id>/feed', 'POST', $params);
            echo 'ok';
        } catch(Exception $e) {
            echo $e->getMessage();
        }
    }
?>
```

Server Side Script (*Facebook API*)

```
<?php
    require('facebook.php');
    $acctoken = 'xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxx';
    $config = array(
        'appId' => 'xxxxxxxxxxxxxxxxxxxxxx',
        'secret' => 'xxxxxxxxxxxxxxxxxxxxxxxxxxxxxx',
        'fileUpload' => false,
    );
    if(isset($_GET['msg']) && ($_GET['msg'] != ""))
    {
        $fb = new Facebook($config);
        $params = array(
            "access_token" => $acctoken,
            "message" => $_GET['msg'],
        );
        try {
            $ret = $fb->api('/<fb_id>/feed', 'POST', $params);
            echo 'ok';
        } catch(Exception $e) {
            echo $e->getMessage();
        }
    }
?>
```
