Quem Somos?

BrByte Telecom é a
melhor solução
de internet sem fio
disponível
no mercado em Mato
Grosso do Sul

Provedor de Internet

Cobertura nas áreas de Corumbá, Ladário, Aquidauana e região.

Desenvolvimento de sistemas

Foco em soluções para provedores com produtos como SpeedR - cache e ISP
Controllr para gerenciamento de provedores

Breve história da BRbyte

2013

Backbone

Obras

23/07/13 Termina Obras,

Teste equipamentos

15/10/2013 Teste de diversos modelos de rádios na primeira “perna” do enlace (108Km)

Início dos Testes em Campo

Intelbras, Radwin - rb+ cartões r52HN, Rocket Sucesso com Basebox 5 (rb912).

2014

ALGcom

Pesquisando diversas opções no mercado, optamos por iniciar testes em 5.8 com ALGCOM- 23/02/2014

108 KM

14/03/14 Primeiro enlace a 108KM realizado com sucesso. 90mb Half.

405 KM

12/04/2014 Havíamos terminado o enlace completo usando ALGCOM, ao longo dos 405KM

28/04/2014 Começamos a operar com o Backbone, sem duplicação

Duplicação

30/07/2014 Pedido de 06 antenas para duplicação.

15/08/2014 Terminei Duplicação

23/08/2014 Problemas com conexão TCP (01 conexão baixa performance)

28/08/2014 Troca todos os roteadores por modelos multi processadores (ccr 1036 e ccr 1009 MIKROTIK

Case de sucesso: 405 KM – a rota:

Enlace Campo Grande à Paxixi - 107 Km

Profile: 107.0 kilometers, Line-of-Sight

Enlace Paxixi à Bodoquena - 133,6 Km

Profile: 133.6 kilometers, Line-of-Sight

Enlace Bodoquena à MPP - 122,8Km

Profile: 122.8 kilometers, Line-of-Sight

Enlace Torre MPP à BrByte - 24 Km

Desafios na logística

802.11ac Enlaces ponto a ponto

Ganho de throughput no ponto a ponto com rádios 802.11ac será bem grande.

Alguns cuidados serão fundamentais para um bom enlace:

Planejamento

De forma aleatória não teremos os melhores resultados e apenas vamos poluir o espectro

Visada

Visada livre **NÃO SIGNIFICA** poder enxergar a olho nú o outro lado. É necessário simular o enlace e verificar a existência de edifícios e árvores no fresnel.

Uma boa altura de torres é fundamental e sem visada livre a tecnologia não trará bons resultados pois não poderá trabalhar nas melhores modulações.

Ruído

Medir previamente o nível de ruído e os canais disponíveis nos pontos do enlace economiza tempo e dinheiro em equipamento!

Equipamento

Equipamentos de primeira linha vão garantir a relação sinal ruído necessária para o bom funcionamento da rede

Antena

Antenas blindadas trazem maior atenuação ao ruído, e devem ser funcionais em toda faixa do espectro.

A maioria das antenas de qualidade está homologada em 5.25 a 5.85 GHz estando aptas para o 802.11ac

Fonte

802.11ac demanda mais processamento dos rádios e ter boa fonte de energia sem ruído é também fundamental

Guia rápido tamanhos e distâncias
