

Bienvenue au CAMEROUN

MikroTik

FIREWALL ET GESTION DE BANDE PASSANTE

Mikrotik MUM – Yaoundé
January 26, 2018

MikroTik

FIREWALL AND BANDWIDTH MANAGEMENT

Mikrotik MUM – Yaoundé
January 26, 2018

ULRICK NKWEDJA LAKOUDJI

- Using MikroTik since 2013 as Technical support in CLBCNET (MTN Partner)
- 2015 – Technical Team Coordinator at SOCAPRESCO (MTN Partner)
- 2017 – Certified MTCNA , MTCRE , CCNA Instructor, ...
- 2017 – NOC & SAV Engineer, SAV Supervisor at SWECOM

SWECOM OVERVIEW

SWECOM stands for SOUTHWEST COMMUNICATION and it started as a cable distributor in Fako in 1998.

It later extended its distribution to some other regions by 2005.

However in 2008 SWECOM established an IT department and became an internet service provider (ISP) in Douala and in 2011 it extended to other regions.

Finally in 2014 it included VOD (VIDEO ON DEMAND) and IT solutions

Our activities :

HD Digital Cable Television

Video on Demand

Broadband Internet Connections

Interconnection

SWECOM is a FTTX provider

OBJECTIVES

- Present advantages i gain by using Mikrotik in my network enviroment;
- How to set up firewall to manage the bandwidth;
- How to set up Queues to manage the bandwidth;
- Conclusion and questions

ADVANTAGES OF USING MIKROTIK

- Cheap
- All in one – Many features in the same material
- Many tools in one for troubleshooting
- Easy to manage and to access
- Mikrotik makes my network administration more easier

FIREWALL

Senario : At 9 am you are not able to browse on internet,
What is wrong ?

- Internet is a crucial resource for enterprises of today
- The high disponibility of internet will be garanty
- To protect the router from unauthorized access, both originating from the WAN (Internet) or from the LAN (local).
- To protect the network that through the router.
- In MikroTik, firewall has many features that are all included in the IP Firewall menu.

FIREWALL : HOW TO CONFIGURE

How to configure firewall in mikrotik to protect our network ?

- Basic Firewall in MikroTik configure at IP>Firewall>Filter Rule

A lot of traffic to be filtered, which one allowed (accept) and which one will be rejected (drop).

FIREWALL : HOW TO

Chain :

Input

All incoming packets are checked against the rules in this chain.

Output

All outgoing packets are checked against the rules in this chain.

Forward

All packets being sent to another computer are checked against the rules in this chain.

To manage the bandwidth the chain **Forward** is the one used.

FIREWALL : HOW TO

MikroTik has firewall feature to block content

- Block client who will access web which contain the word "porn", "youtube", etc.

In IP>Firewall>Filter Rule

Add chain=forward, go to advanced tab content=youtube, action=drop

The image displays three overlapping screenshots of the MikroTik WinBox Firewall Rule configuration interface, illustrating the steps to create a content-filtering rule.

- Leftmost Screenshot (General Tab):** Shows the 'Chain' dropdown set to 'forward'. Other fields like 'Src. Address', 'Dst. Address', 'Protocol', 'Src. Port', 'Dst. Port', 'Any. Port', 'In. Interface', and 'Out. Interface' are visible but empty.
- Middle Screenshot (Advanced Tab):** Shows the 'Content' checkbox checked and the text 'youtube' entered in the adjacent field. Other fields like 'Src. Address List', 'Dst. Address List', 'Layer7 Protocol', 'Connection Bytes', 'Connection Rate', 'Per Connection Classifier', and 'Src. MAC Address' are visible but empty.
- Rightmost Screenshot (Action Tab):** Shows the 'Action' dropdown set to 'drop'. The 'Log' checkbox is unchecked, and the 'Log Prefix' field is empty.

FIREWALL : HOW TO

One great option in mikrotik firewall is to set time within that the rule will be active or not.

/ip firewall filter

add action=drop chain=input disabled=no in-interface=LAN-ether2 protocol=icmp time=8h-10h30m,sun,mon,tue,wed,thu,fri,sat

Mikrotik firewall as many other advanced feature like:

- Bloking P2P to minimize bandwidht consupntion

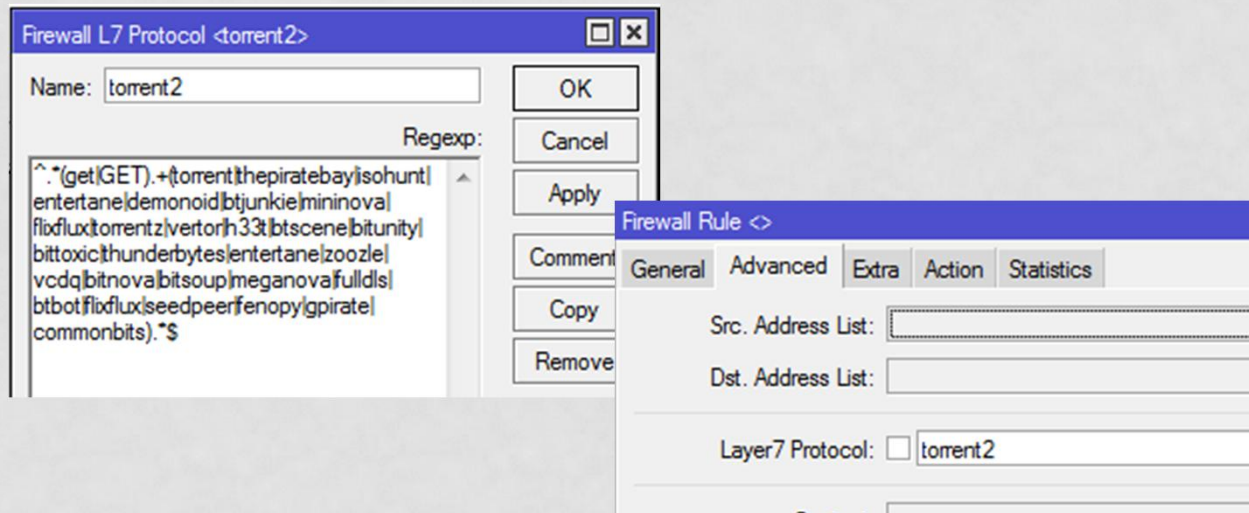

The image displays two side-by-side screenshots of the 'New Firewall Rule' configuration window in Mikrotik WinBox. The left window shows the 'General' tab with 'Chain' set to 'forward', 'Src. Address' and 'Dst. Address' fields empty, 'Protocol' set to 'icmp', and 'P2P' checked with 'all-p2p' selected. The right window shows the 'Action' tab with 'Action' set to 'drop'.

FIREWALL : HOW TO

This option is not more available in new Router OS

➤ Layer 7 Protocol using regular expression

Exemple of blocking access to torrent site using layer 7 Protocol

We can also use firewall to save bandwidth by denying donwloading based on file extention : .mp3, .exe, .avi , etc.

FIREWALL : END

Mikrotik firewall is a powerful and flexible tool. Easy to set and to manage.

We can use firewall to manage the bandwidth usage as well as protecting our network.

One other feature we have is the queues

QUEUES

Queues are used to limit and prioritize traffic:

- limit data rate for certain IP addresses, subnets, protocols, ports, and other parameters
- limit peer-to-peer traffic
- prioritize some packet flows over others
- configure traffic bursts for faster web browsing
- apply different limits based on time
- share available traffic among users equally, or depending on the load of the channel

QUEUES

There are two different ways how to configure queues in RouterOS:

/queue simple menu - designed to ease configuration of simple, everyday queuing tasks (such as single client upload/download limitation, p2p traffic limitation, etc.).

/queue tree menu - for implementing advanced queuing tasks (such as global prioritization policy, user group limitations). Requires marked packet flows from **/ip firewall mangle** facility.

Rule order is important for queue rules

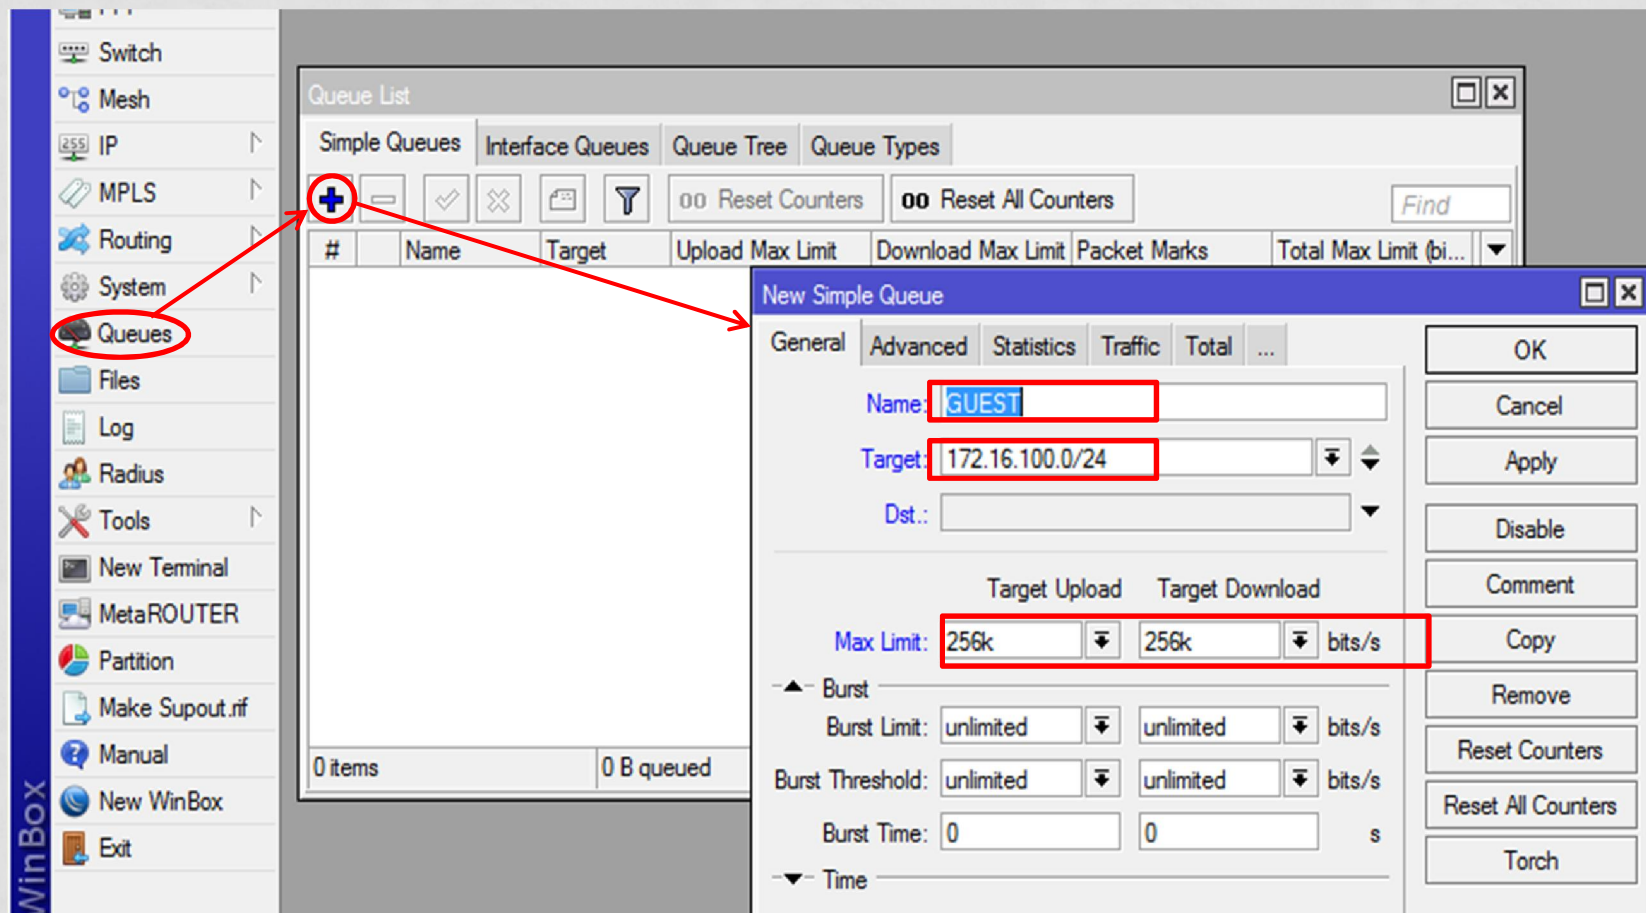

QUEUES

Rate limiting is used to control the rate of traffic flow sent or received on a network interface.

The simplest way to limit data rate for specific IP addresses and/or subnets, is to use simple queues.

QUEUES : HOW TO

QUEUES : HOW TO

20				7.251	2M	2M
21				255.35	8M	8M
22				4.8	60M	60M
23				250.250	40M	40M
24				5.160/30	10M	10M
25		BOXTV		5.204/30	unlimited	unlimited

Tells that the user traffic is less than the limit specified

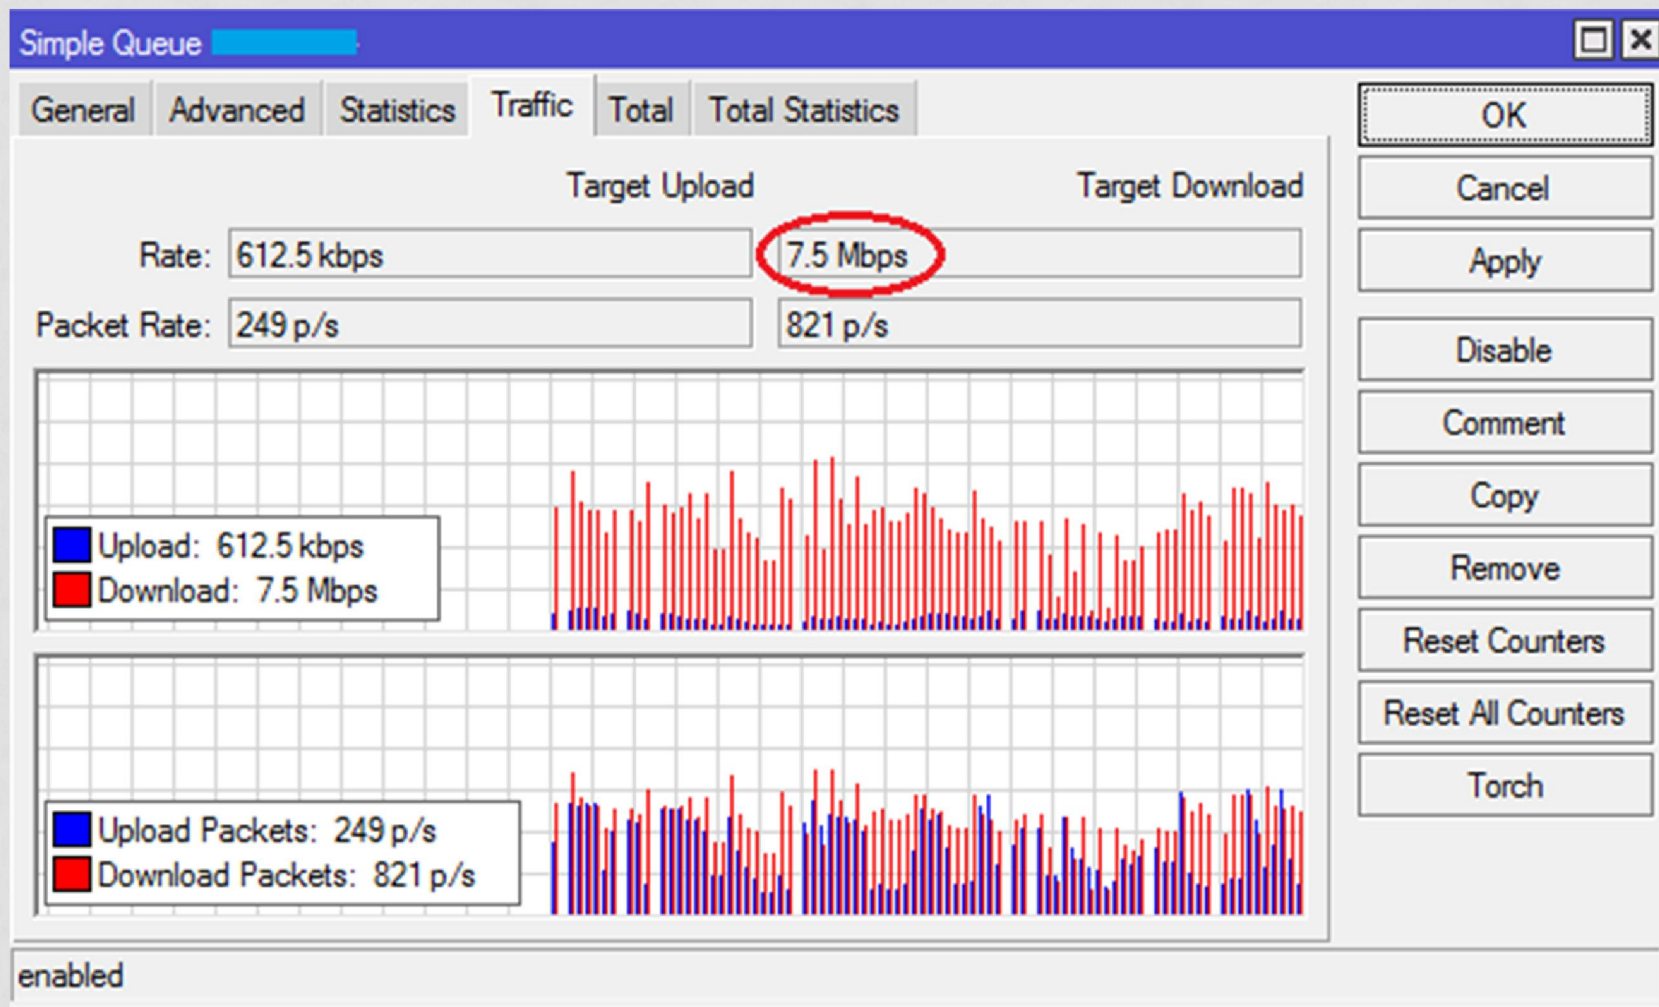

Tells that the user traffic is about to reach the limit specified

Tells that the user traffic reach or exceed the limit specified

QUEUES : END

CONCLUSION

MikroTik is genial

Questions & Answers
