W60G new features

- Revised "master" and "slave" interface modes to more familiar "bridge", "ap-bridge", "station-bridge"
- Added "put-stations-in-bridge" and "isolate-stations" options to easy manage connected clients
- MCS rates under MCS4 now are supported
- SNMP support starting from 6.42rc7

W60G new features

W60G new features

- LEDs help to find best Beamforming pattern

Wireless device testing

Few suggestions:

- It is preferred not to run testing tools on devices under test
- Check for bottlenecks
- Wireless devices can suffer from interference
- Test at power outputs that will be used on the device

Testing software

- Bandwidth test
 - Works under RouterOS, PC (Windows, Mac, Linux)
- Traffic Generator
 - Works under RouterOS
- Iperf and iperf3
 - Works on PC (Windows, Mac, Linux)
- Speedtest.net
- Other tools

Live demo

Test setup:

```
/tool traffic-generator packet-template
add ip-dst=192.168.1.1 ip-gateway=192.168.1.2 ip-src=192.168.1.10 name=test1 udp-dst-port=100-300
/tool traffic-generator stream
add mbps=900 name=stream1 packet-size=1500 tx-template=test1
```

Live demo

- To start Traffic Generator run:

/tool traffic-generator start

- To stop:

/tool traffic-generator stop

- To run temporary Traffic Generator with extra arguments:

/tool traffic-generator quick mbps=300 packet-size=256 duration=100
