

CAPsMAN Case Study

Uldis Cernevskis

MikroTik, Latvia

MUM Pittsburgh

September 2014

CAPsMAN Features

- Centralized management of RouterOS APs
- Dual Band AP support
- Provisioning of APs
- MAC and IP Layer communication with APs
- Certificate support for AP communication
- Full and Local data forwarding mode
- RADIUS MAC authentication
- Custom configuration support

Requirements

- CAPsMAN
 - x86 or RouterBOARD based device
 - Newest RouterOS v6 version
 - Wireless-fp package installed and enabled

- CAP
 - X86 or RouterBOARD based device
 - Newest RouterOS v6 version
 - Atheros chipset (a/b/g/n/ac) wireless card
 - Wireless-fp package installed and enabled
 - At least Level4 RouterOS license

CAPsMAN Simple Setup

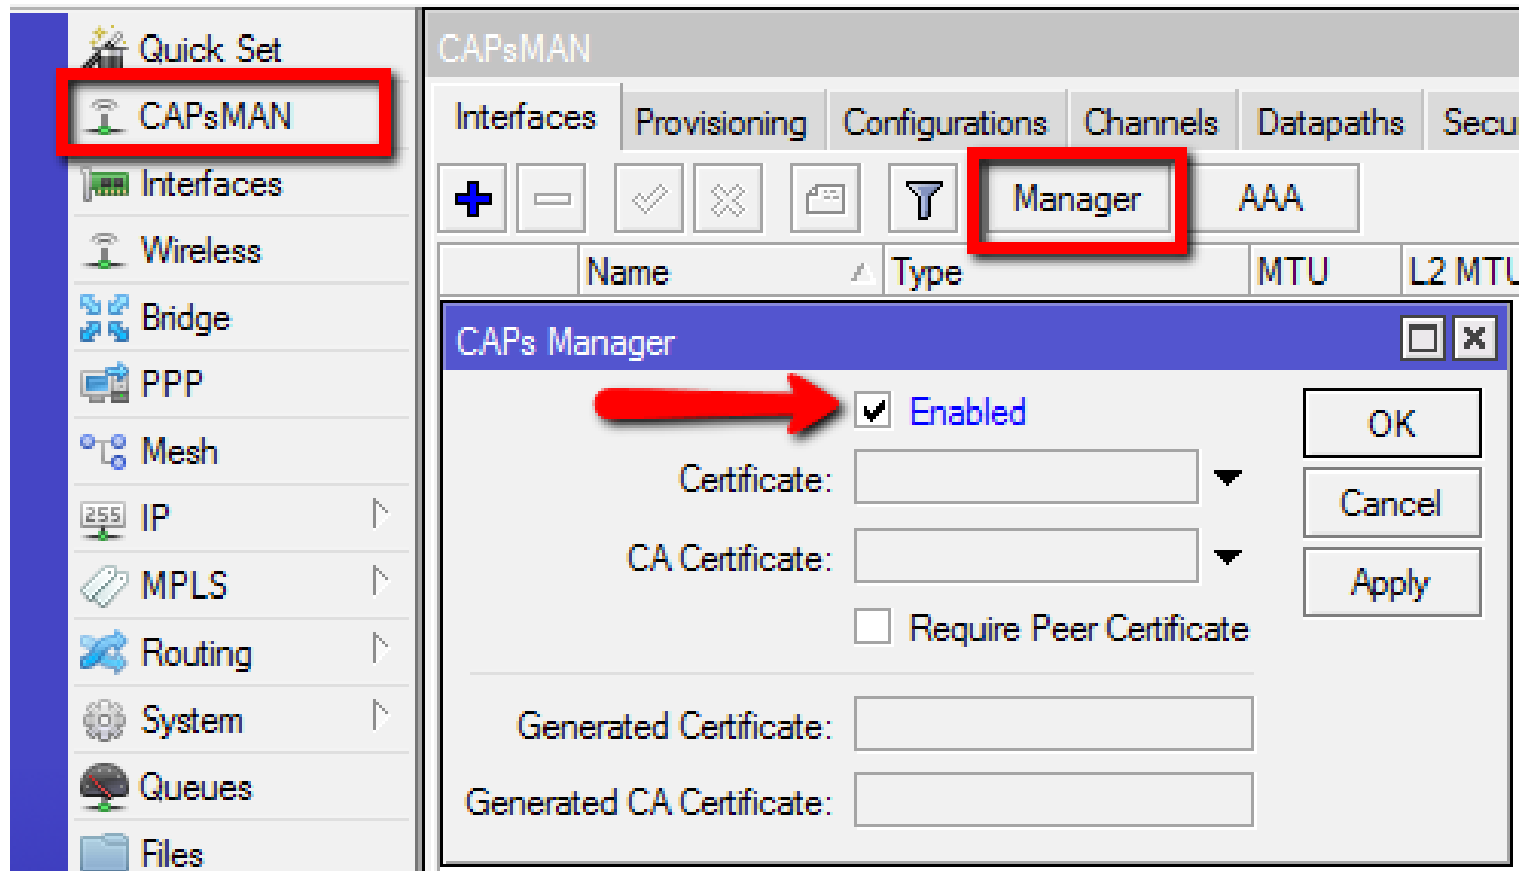

CAPsMAN Simple Setup

- Enable CAPsMAN service
- Create Bridge interface
- Add IP configuration to Bridge interface
- Create CAPsMAN Configuration
- Create Provisioning rule
- Enable CAP mode on the APs

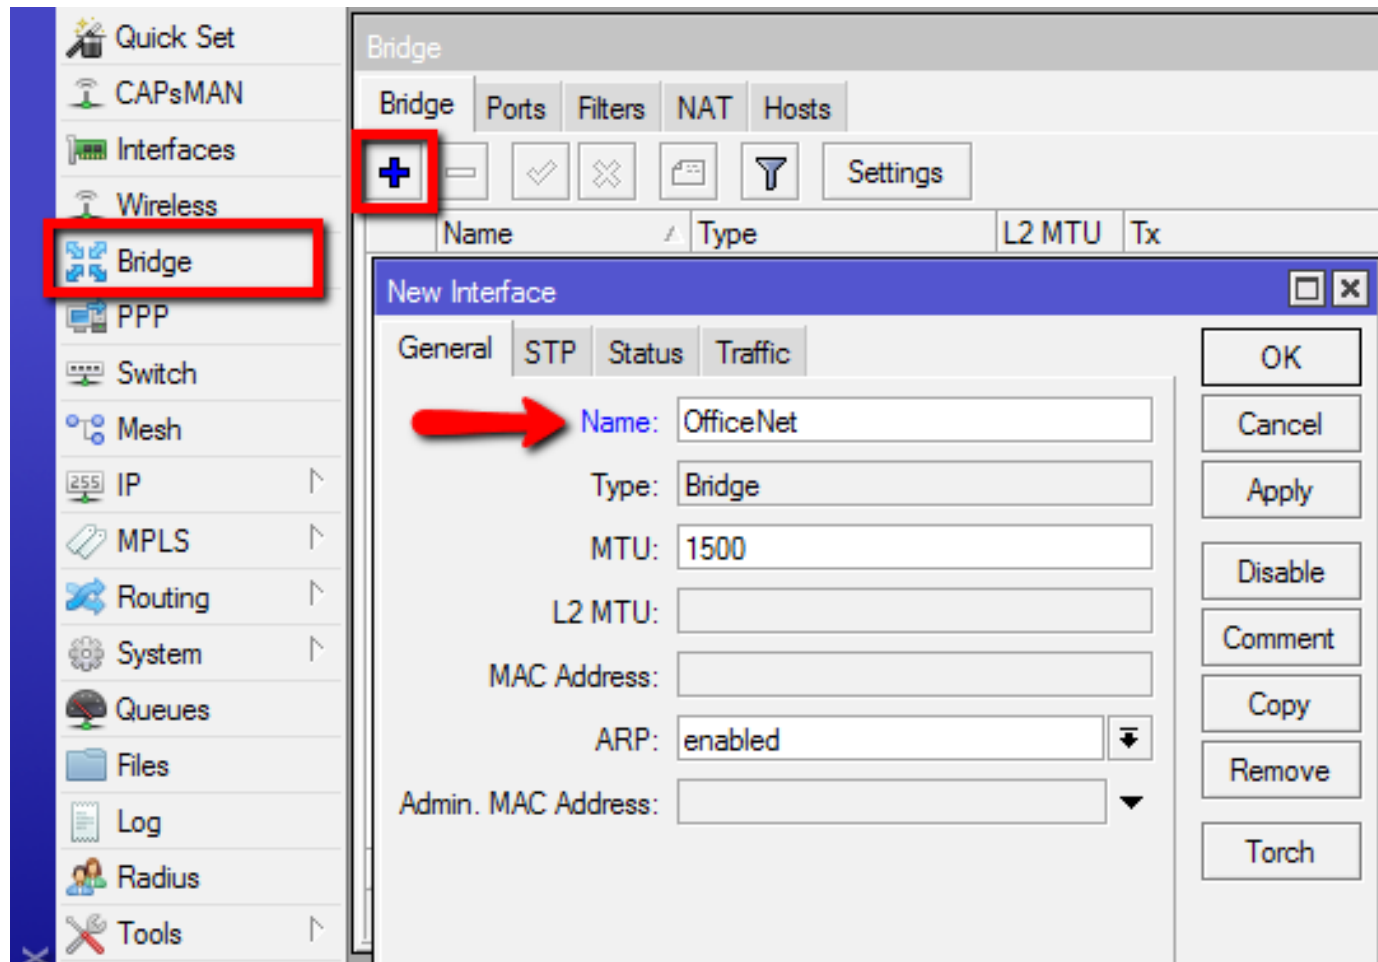

CAPsMAN Simple Setup

- Enable the CAPsMAN service

CAPsMAN Simple Setup

- Create Bridge Interface

CAPsMAN Simple Setup

- 1. Add IP address
- 2. Add DHCP Server
- 3. Add NAT rule

The screenshot displays the Mikrotik WinBox interface with three windows open, each illustrating a step in the CAPsMAN setup process. Red boxes and numbers highlight key elements:

- Step 1:** The 'Address List' window shows a '+ Add' button (circled in red) and a 'New Address' dialog box. The 'Address' field is set to '10.10.10.1/24' and the 'Interface' is 'OfficeNet'. A red box with the number '1' highlights the 'New Address' dialog.
- Step 2:** The 'DHCP Server' window shows a '+ Add' button (circled in red) and a 'DHCP Setup' dialog box. The 'DHCP Server Interface' is set to 'OfficeNet'. A red box with the number '2' highlights the 'DHCP Setup' dialog, and another red box with the number '2' highlights the 'Next' button.
- Step 3:** The 'Firewall' window shows the 'Filter Rules' tab selected, with a '+ Add' button (circled in red) and a 'New NAT Rule' dialog box. The 'Chain' is set to 'srcnat' and the 'Action' is 'masquerade'. A red box with the number '3' highlights the 'New NAT Rule' dialog.

CAPsMAN Simple Setup

- Add New CAPsMAN Configuration

The screenshot displays the CAPsMAN web interface with the following configuration steps highlighted by red boxes:

- Configurations Tab:** The 'Configurations' tab is selected in the top navigation bar.
- Add Button:** A blue plus sign icon is used to add a new configuration.
- Wireless Tab:** The 'Wireless' tab is selected in the 'New CAPs Configuration' panel.
- Datapath Tab:** The 'Datapath' tab is selected in the 'New CAPs Configuration' panel.
- Security Tab:** The 'Security' tab is selected in the 'New CAPs Configuration' panel.

The configuration details shown are:

- Wireless Tab:** Name: OfficeNet, Mode: [empty], SSID: Office, Hide SSID: [empty], Load Balancing Group: [empty], Country: united states, Max Station Count: [empty], Multicast Helper: [empty], HT Tx Chains: [empty], HT Rx Chains: [empty], HT Guard Interval: [empty].
- Datapath Tab:** Datapath: [empty], Bridge: OfficeNet, Bridge Cost: [empty], Bridge Horizon: [empty], Local Forwarding: [empty], Client To Client Forwarding: [empty], VLAN Mode: [empty], VLAN ID: [empty].
- Security Tab:** Security: [empty], Authentication Type: WPA PSK WPA2 PSK WPA EAP WPA2 EAP, Encryption: aes ccm tkip, Group Encryption: aes ccm, Passphrase: OfficeNet, EAP Methods: [empty].

CAPsMAN Simple Setup

- Add new Provisioning rule

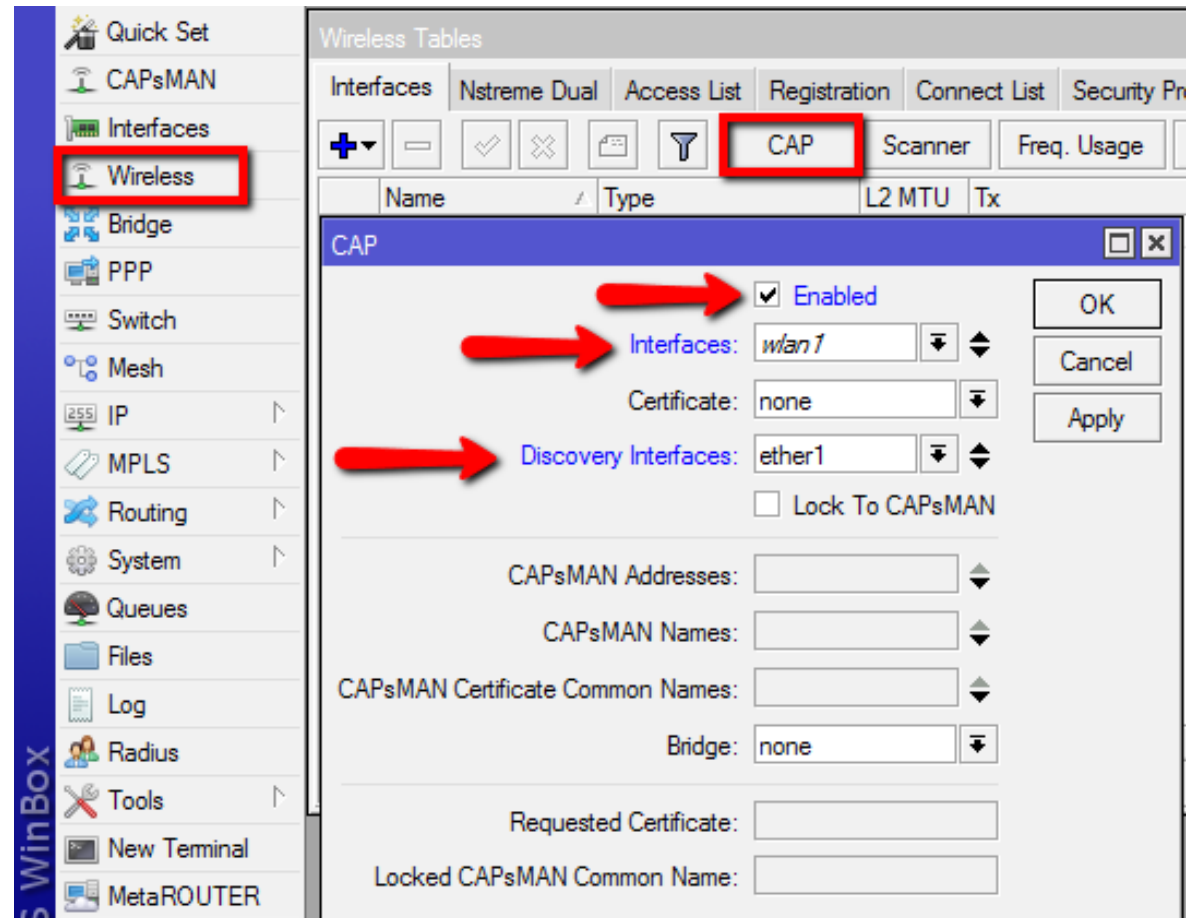

The screenshot shows the CAPsMAN software interface. The 'Provisioning' tab is selected and highlighted with a red box. Below the tab, a toolbar contains several icons, with a plus sign icon also highlighted by a red box. A dialog box titled 'New CAPs Provisioning' is open, displaying the following fields and options:

#	Radio MAC	Action	Master Configurati...	Slave C
	Radio MAC: 00:00:00:00:00:00	Action: create dynamic enabled	Master Configuration: OfficeNet	Slave Configuration:
			Name Prefix: OfficeAP	

Buttons on the right side of the dialog box include: OK, Cancel, Apply, Disable, Comment, Copy, and Remove. The status 'enabled' is shown at the bottom left of the dialog box.

CAPsMAN Simple Setup

- Configure the AP to use CAP mode
 - Enable wireless-fp package
 - Enable CAP mode
 - By CAP mode button on some boards
 - By configuration in Wireless CAP menu

CAPsMAN Simple Setup

- Check the Status of the CAPsMAN CAP interface

CAPsMAN

The screenshot shows the CAPsMAN configuration interface. The 'Interfaces' tab is selected, displaying a table with columns: Name, Type, MTU, and L2 MTU. The entry 'OfficeAP1' is highlighted, showing it is of type 'Interfaces' with an MTU of 1500 and L2 MTU of 1600. Below the table, the 'Interface <OfficeAP1>' configuration is shown with tabs for General, Wireless, Channel, Datapath, Security, Status, and Traffic. The 'Status' tab is active, showing the following details:

Current State:	running-ap
Current Channel:	2427/20-Ce/gn(30dBm)
Current Rate Set:	CCK:1-11 OFDM:6-54 BW:1x-2x HT:0-7
Current Basic Rate Set:	OFDM:6 BW:1x HT:0-7

CAP

The screenshot shows the Wireless Tables configuration interface. The 'Interfaces' tab is selected, displaying a table with columns: Name, Type, L2 MTU, and Tx. The entry 'wlan1' is highlighted, showing it is of type 'Wireless (Atheros AR9...)' with an L2 MTU of 1600. Below the table, the 'Interface <wlan1>' configuration is shown with tabs for General, Wireless, Channel, Datapath, Security, Status, and Traffic. The 'Status' tab is active, showing the following details:

Current State:	running-ap
Current Channel:	2427/20-Ce/gn(30dBm)
Current Rate Set:	CCK:1-11 OFDM:6-54 BW:1x-2x HT:0-7
Current Basic Rate Set:	OFDM:6 BW:1x HT:0-7

Copy to Access List

Manual Provisioning

- Changing Provisioning rules doesn't effect already configured CAPs, manual Provisioning required:
 - Remove CAP interface
 - Initiate Provision command on the CAP

The screenshot shows the CAPsMAN web interface. The top navigation bar includes tabs for Interfaces, Provisioning, Configurations, Channels, Datapaths, Security Cfg., Access List, Remote CAP, and Radio. The Radio tab is selected and highlighted with a red box. Below the navigation bar, there is a sub-menu with a filter icon and a 'Provision' button, also highlighted with a red box. The main content area displays a table with the following data:

	Radio MAC	Remote CAP Name	Remote CAP Id...	Interface	
	4C:5E:0C:6C:63:28	[4C:5E:0C:6C:63:28]	Room4		
P	4C:5E:0C:6C:63:2B	[4C:5E:0C:6C:63:2B]	Room3	OfficeAP1	
P	4C:5E:0C:6C:63:4C	[4C:5E:0C:6C:63:4C]	Room1	OfficeAP2	
P	4C:5E:0C:6C:63:3A	[4C:5E:0C:6C:63:3A]	Room2	OfficeAP3	

CAP to CAPsMAN Connection

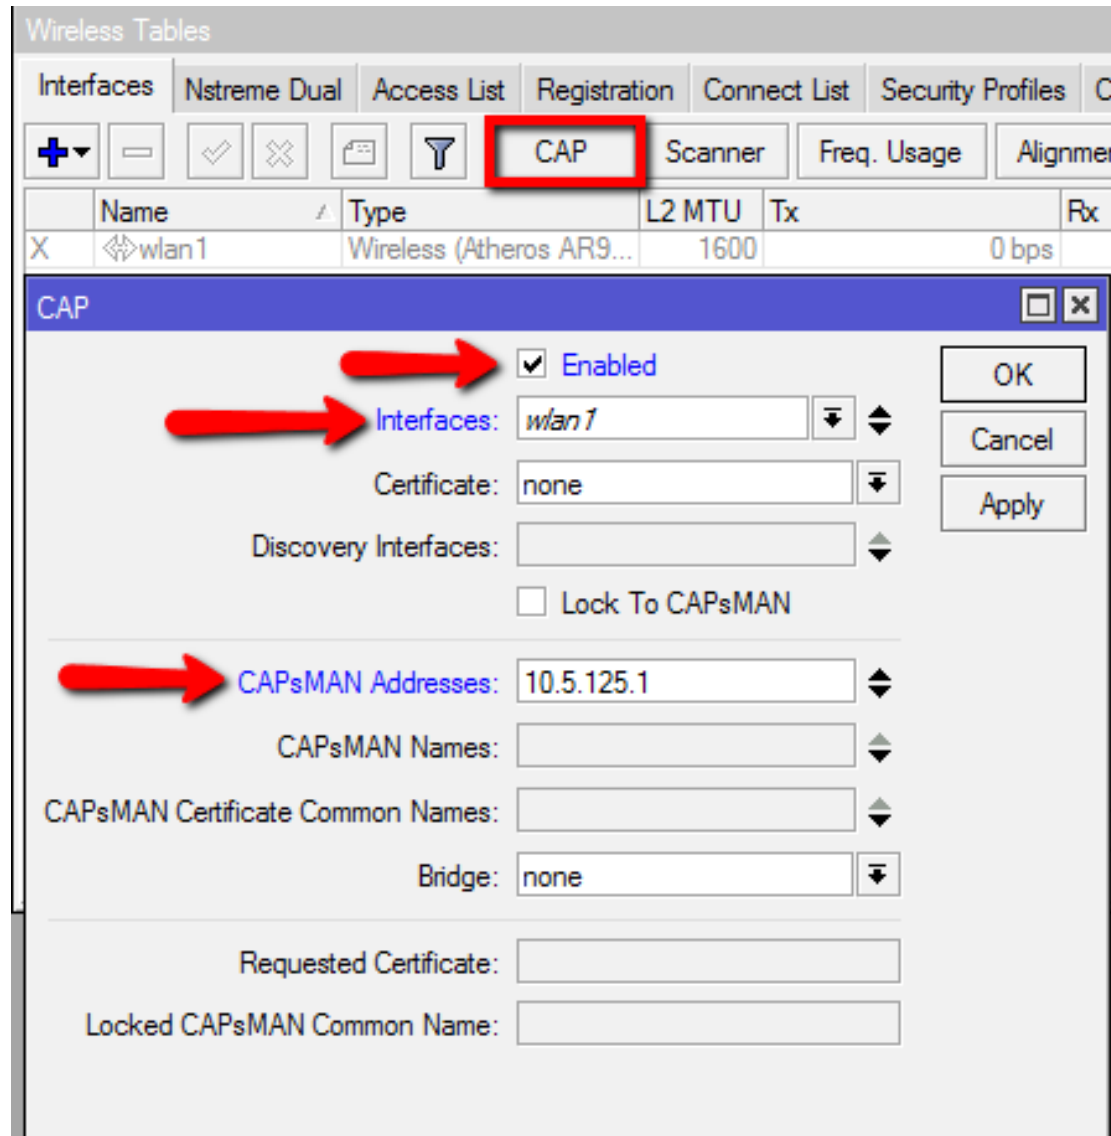

- MAC Layer2:
 - No IP configuration required
 - CAP and CAPsMAN must be in the same Layer 2 network
- IP (UDP) Layer3:
 - CAP must reach the CAPsMAN using IP protocol
 - Can traverse NAT if necessary
- Management connection between CAP and CAPsMAN is secured using DTLS
- CAP client data traffic is not secured – if necessary additional encryption by using IPSec or encrypted tunnels is needed

CAPsMAN Selection on CAP

- CAP attempts to contact CAPsMAN and build available CAPsMAN list:
 - List of CAPsMAN IPs
 - List of CAPsMAN IPs obtained from DHCP
 - Broadcasting on configured interfaces using IP and MAC Layer
- CAP selects the CAPsMAN based on such rules:
 - If CAPsMAN names setting is matched it will prefer that CAPsMAN earlier in the list
 - MAC layer connectivity to CAPsMAN is preferred over IP connectivity
 - If list is empty it will connect to any available CAPsMAN

CAPsMAN with Layer3

- On the CAP specify the IP address of the CAPsMAN

The screenshot shows the Mikrotik WinBox interface for configuring a CAP (Client Access Point). The 'CAP' tab is selected in the 'Wireless Tables' window. The configuration dialog is open, showing the following settings:

- Enabled:** (indicated by a red arrow)
- Interfaces:** wlan1 (indicated by a red arrow)
- Certificate:** none
- Discovery Interfaces:** (empty)
- Lock To CAPsMAN:**
- CAPsMAN Addresses:** 10.5.125.1 (indicated by a red arrow)
- CAPsMAN Names:** (empty)
- CAPsMAN Certificate Common Names:** (empty)
- Bridge:** none
- Requested Certificate:** (empty)
- Locked CAPsMAN Common Name:** (empty)

Buttons for OK, Cancel, and Apply are visible on the right side of the dialog.

CAPsMAN selection using Name

- On the CAP specify the CAPsMAN identity name

CAP Identification

- MAC/IP address
- RouterBoard model
- Serial Number of the Board
- RouterOS version
- System Identity
- Main wireless MAC
- State of the CAP
- Provided radio count

The screenshot shows the Mikrotik CAPsMAN web interface. The 'Remote CAP' tab is selected and highlighted with a red box. Below the navigation tabs, there are buttons for 'Provision' and a filter icon. The main content area displays a table with the following columns: Address, Name, Board, Serial, Version, Identity, Base MAC, State, and Radios. The table contains five rows of data representing different CAPs.

Address	Name	Board	Serial	Version	Identity	Base MAC	State	Radios
4C:5E:0C:6C:63:26	[4C:5E:0C:6C:63:28]	RBmAP2n	52760434DCE4	6.19	Room4	4C:5E:0C:6C:63:28	Run	1

CAPsMAN static CAP interface

- No interface name change or setting change after the reboot
- Additional manual setting override
- Copy dynamic interface to make static interface

The screenshot displays the CAPsMAN configuration interface. At the top, there are tabs for 'Interfaces', 'Provisioning', 'Configurations', 'Channels', 'Datapaths', 'Security Cfg.', 'Access List', 'Remote CAP', 'Radio', and 'Registration Table'. Below these tabs is a toolbar with icons for adding, deleting, and filtering, along with a 'Find' search box. A table lists the current interfaces, with 'OfficeAP5' selected. Below the table, the configuration for 'OfficeAP5' is shown, including fields for Name, Type, MTU, L2 MTU, MAC Address, and ARP. A 'Copy' button is highlighted with a red box. To the right, a 'New Interface' dialog box is open, showing the same configuration fields but with the name changed to 'Room5AP'. The 'OK' button in this dialog is also highlighted with a red box. A red arrow points from the 'Copy' button to the 'Name' field in the 'New Interface' dialog.

Name	Type	MTU	L2 MTU	Tx	Rx	Tx Packet (p/s)	Rx Packet (p/s)	SSID	Hide SSID
OfficeAP5	Interfaces	1500	1600	0 bps	0 bps	0	0	Office

CAPsMAN VirtualAP

CAPsMAN VirtualAP Configuration

- Create new Bridge interface and IP configuration for the VirtualAPs or use the same bridge interface as Master AP
- Create a new configuration for the VirtualAP
- Specify the new configuration in Provisioning rule as Slave Configuration
- Remove all CAP interfaces
- Initiate Manual Provisioning on all the CAPs

CAPsMAN VirtualAP Setup

The screenshot displays the CAPsMAN configuration interface. At the top, a navigation bar includes tabs for 'Interfaces', 'Provisioning', 'Configurations', 'Channels', 'Datapaths', 'Security Cfg.', 'Access List', 'Remote CAP', 'Radio', and 'Registration Table'. The 'Configurations' tab is selected and highlighted with a red box. Below the navigation bar, a toolbar contains a plus sign icon (highlighted with a red box), a minus sign icon, a speech bubble icon, and a funnel icon. A table lists existing configurations with columns for Name, SSID, Hide SSID, Load Bal..., Country, Channel, Frequency, and Band. One entry is visible: 'OfficeNet' with SSID 'Office' and Country 'united sta...'. Below the table, two 'New CAPs Configuration' dialog boxes are shown. The left dialog has the 'Wireless' tab selected (highlighted with a red box) and contains fields for Name (GuestNet), Mode, SSID (Guest), Hide SSID, Load Balancing Group, Country, Max Station Count, Multicast Helper, HT Tx Chains, HT Rx Chains, and HT Guard Interval. The right dialog has the 'Datapath' tab selected (highlighted with a red box) and contains fields for Datapath, Bridge (GuestNet), Bridge Cost, Bridge Horizon, Local Forwarding, Client To Client Forwarding, VLAN Mode, and VLAN ID.

CAPsMAN Access List Features

- MAC Authentication
- Radius Query support
- MAC Mask support
- Signal Range
- Time
- Private Passphrase
- VLAN ID assignment

CAPsMAN Access List

- Allow Apple devices to connect
- Rest of the connections pass to the RADIUS

The screenshot displays the CAPsMAN configuration interface with the 'Access List' tab selected. A table below the tabs shows the configuration for two new access rules. The first rule has a MAC address of 18:34:51:00:00:00 and an 'accept' action. The second rule has an empty MAC address field and a 'query radius' action. Both rules are currently enabled.

#	MAC Address	MAC Mask	Interface	Signal Ra...	Action	Client To Clie...	VLAN Mo...	VLAN ID
	18:34:51:00:00:00	FF:FF:FF:00:00:00			accept			
					query radius			

New CAPs Access Rule (Left Dialog):

- MAC Address: 18:34:51:00:00:00
- MAC Mask: FF:FF:FF:00:00:00
- Interface: [Empty]
- Signal Range: [Empty]
- Action: accept
- AP Tx Limit: [Empty]
- Client Tx Limit: [Empty]
- Private Passphrase: [Empty]
- Client To Client Forwarding: [Empty]
- RADIUS Accounting: [Empty]
- VLAN Mode: [Empty]
- VLAN ID: [Empty]
- Status: enabled

New CAPs Access Rule (Right Dialog):

- MAC Address: [Empty]
- MAC Mask: [Empty]
- Interface: [Empty]
- Signal Range: [Empty]
- Action: query radius
- AP Tx Limit: [Empty]
- Client Tx Limit: [Empty]
- Private Passphrase: [Empty]
- Client To Client Forwarding: [Empty]
- RADIUS Accounting: [Empty]
- VLAN Mode: [Empty]
- VLAN ID: [Empty]
- Status: enabled

CAPsMAN Local Forwarding Setup

CAPsMAN Local Forwarding

- Create a Local Forwarding configuration

The screenshot displays the CAPsMAN configuration interface. At the top, the 'Configurations' tab is selected and highlighted with a red box. Below the navigation tabs, a '+' icon is highlighted with a red box. A table lists existing configurations:

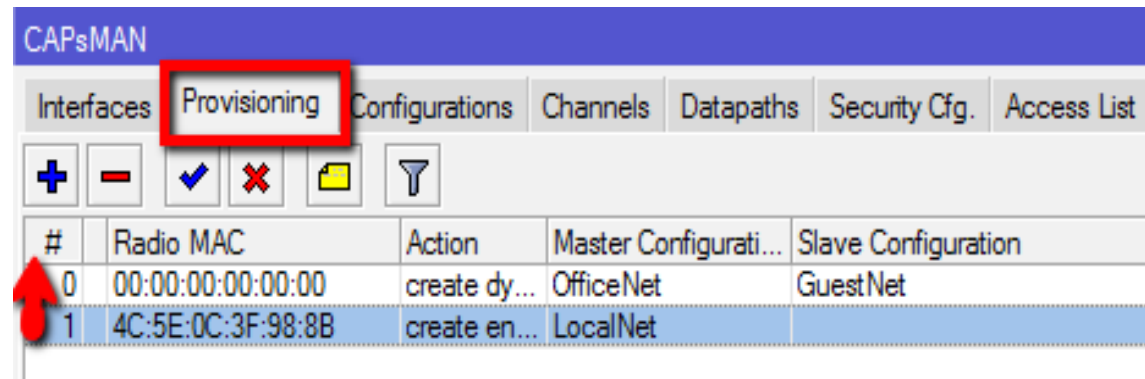

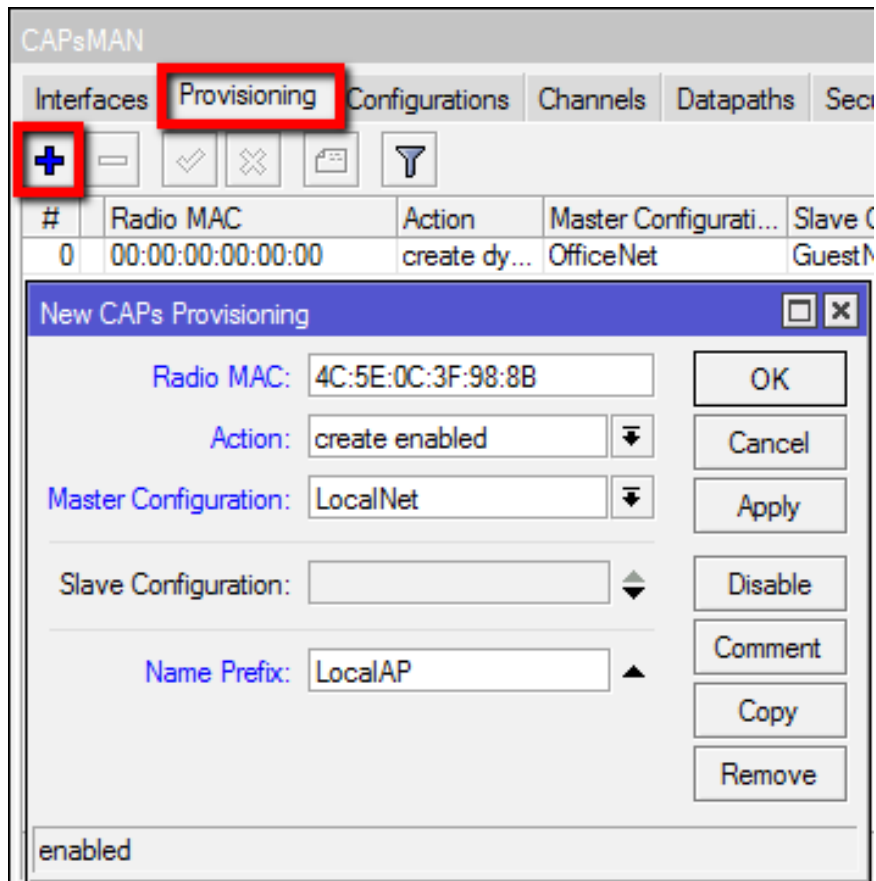

Name	SSID	Hide SSID	Load Bal...	Country	Channel	Frequency	Band	Datapath	Bridge	VLAN M...
GuestNet	Guest								GuestNet	
OfficeNet	Office			united sta...					OfficeNet	

Below the table, three configuration panels are shown for a new configuration named 'LocalNet':

- Wireless Panel:** The 'Wireless' tab is highlighted with a red box. Fields include Name: LocalNet, Mode: (empty), SSID: LocalNet, Hide SSID: (empty), Load Balancing Group: (empty), Country: united states, Max Station Count: (empty), Multicast Helper: (empty), HT Tx Chains: (empty), HT Rx Chains: (empty), and HT Guard Interval: (empty).
- Datapath Panel:** The 'Datapath' tab is highlighted with a red box. Fields include Datapath: (empty), Bridge: (empty), Bridge Cost: (empty), Bridge Horizon: (empty), Local Forwarding: , Client To Client Forwarding: (empty), VLAN Mode: (empty), and VLAN ID: (empty).
- Security Panel:** The 'Security' tab is highlighted with a red box. Fields include Security: (empty dropdown), Authentication Type: WPA PSK WPA2 PSK WPA EAP WPA2 EAP, Encryption: aes ccm tkip, Group Encryption: aes ccm, Passphrase: LocalNet, and EAP Methods: (empty dropdown).

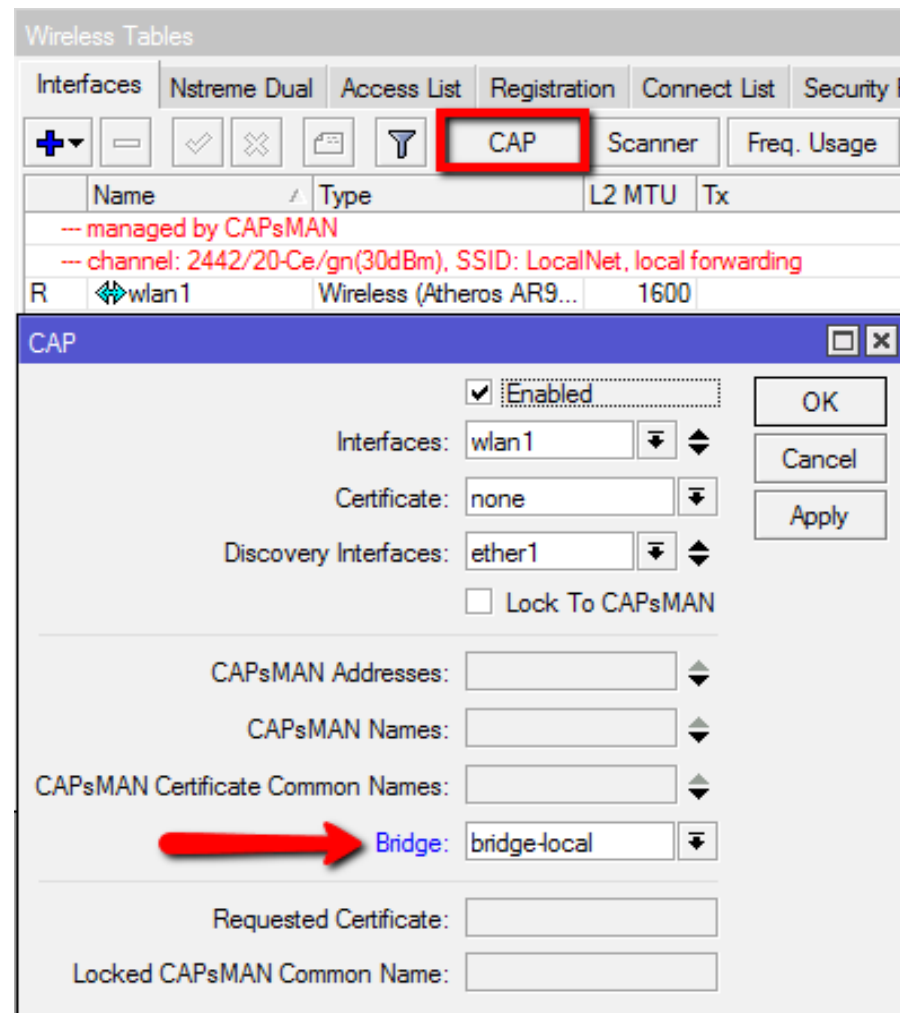

CAPsMAN Local Forwarding

- Create Provisioning rule
- Move above the default Provisioning rule

CAPsMAN Local Forwarding

- On CAP specify the Bridge interface for CAP or use routing for access to network

CAPsMAN VLAN Assignment

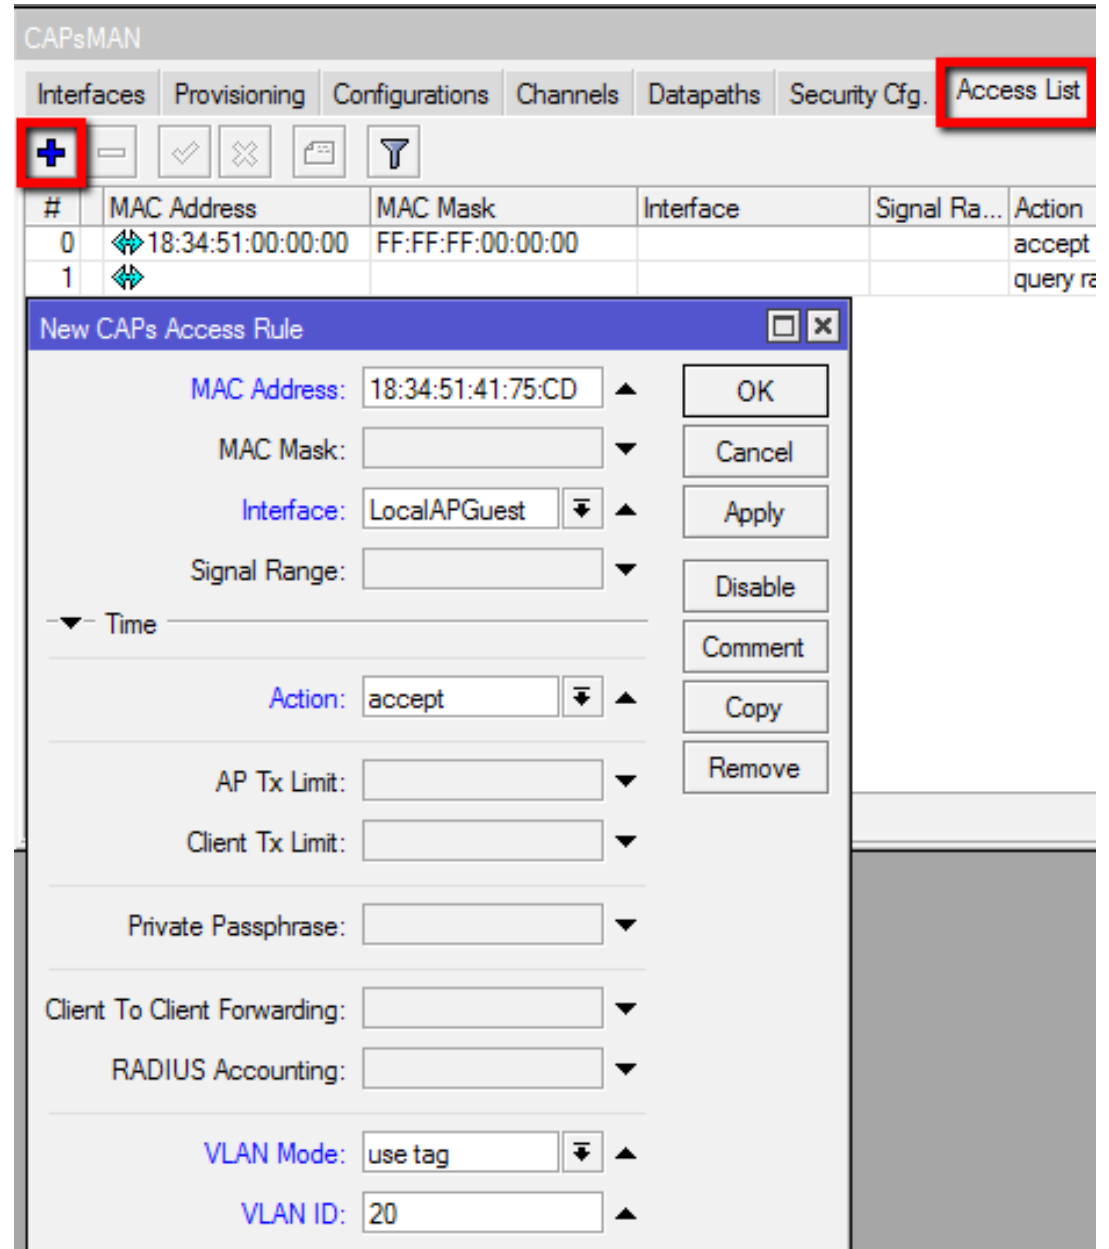

CAPsMAN VLAN Assignment

- When using Local Forwarding CAPsMAN can assign VLAN ID to specific CAP interface or even specific wireless client
- Create Slave interface with Vlan tag

The screenshot displays the CAPsMAN configuration interface. At the top, there are tabs for 'Interfaces', 'Provisioning', 'Configurations', 'Channels', 'Datapaths', 'Security Cfg.', 'Access List', 'Remote CAP', 'Radio', and 'Registration Table'. Below these is a toolbar with icons for adding (+), removing (-), saving (checkmark), deleting (X), and other functions, along with 'Manager' and 'AAA' buttons. A table lists existing interfaces, with 'LocalAP1' highlighted. Below the table are three 'New Interface' configuration panels. The first panel has the 'General' tab selected, showing fields for Name (LocalAPGuest), Type (Interfaces), MTU (1500), L2 MTU, MAC Address (00:00:00:00:00:00), ARP (enabled), Radio MAC (00:00:00:00:00:00), and Master Interface (LocalAP1). The second panel has the 'Wireless' tab selected, showing fields for Configuration, Mode, SSID (LocalGuest), Hide SSID, Load Balancing Group, Country, Max Station Count, Multicast Helper, HT Tx Chains, HT Rx Chains, and HT Guard Interval. The third panel has the 'Datapath' tab selected, showing fields for Datapath, Bridge, Bridge Cost, Bridge Horizon, Local Forwarding (checked), Client To Client Forwarding, VLAN Mode (use tag), and VLAN ID (10). Red boxes highlight the '+' icon, the 'General' tab, the 'Wireless' tab, and the 'Datapath' tab.

CAPsMAN VLAN Assignment

- Create Access List rule for specific client to get tagged to Management Vlan on the same CAP interface
- Move the Access List rule above the previous ones

The screenshot shows the CAPsMAN web interface. The 'Access List' tab is selected and highlighted with a red box. A red box also highlights the '+' icon in the toolbar, indicating the 'Add' action. Below the toolbar is a table with the following data:

#	MAC Address	MAC Mask	Interface	Signal Ra...	Action
0	18:34:51:00:00:00	FF:FF:FF:00:00:00			accept
1					query ra

A 'New CAPs Access Rule' dialog box is open, showing the following configuration:

- MAC Address: 18:34:51:41:75:CD
- MAC Mask: (empty)
- Interface: LocalAPGuest
- Signal Range: (empty)
- Time: (empty)
- Action: accept
- AP Tx Limit: (empty)
- Client Tx Limit: (empty)
- Private Passphrase: (empty)
- Client To Client Forwarding: (empty)
- RADIUS Accounting: (empty)
- VLAN Mode: use tag
- VLAN ID: 20

Buttons on the right side of the dialog include OK, Cancel, Apply, Disable, Comment, Copy, and Remove.

CAPsMAN VLAN Assignment

- Create VLAN interfaces on the CAPsMAN router interface where the CAPs are connected

The screenshot displays the 'Interface List' window in the CAPsMAN configuration tool. The 'VLAN' tab is selected and highlighted with a red box. A red box also highlights the '+' icon in the toolbar, indicating the 'Add New Interface' action. Below the toolbar, two configuration panels for 'New Interface' are shown side-by-side. The left panel is for 'LocalAPGuest-VLAN10' and the right panel is for 'LocalAPGuest-VLAN20'. Both panels have the 'Type' set to 'VLAN' and 'MTU' set to '1500'. The 'VLAN ID' is set to '10' for the first interface and '20' for the second. The 'Interface' is set to 'local' for both. The 'Use Service Tag' checkbox is unchecked in both panels.

Name	Type	MTU	L2 MTU	Tx	Rx
LocalAPGuest-VLAN10	VLAN	1500			
LocalAPGuest-VLAN20	VLAN	1500			

CAPsMAN VLAN Assignment

- Assign IPs to VLAN interfaces on CAPsMAN

CAPsMAN Dual Band CAP

- If the Channel settings are not specified it will automatically use the supported band/channel
- If specific Channel settings are required then specific Provisioning rules are required
 - Custom Channel settings
 - Dual band wireless interface support

CAPsMAN Dual Band CAP

- Create 3 configurations:
 - Config for both bands radio
 - Config for 5ghz only radio
 - Config for 2.4ghz only radio

The screenshot shows the CAPsMAN web interface with the 'Configurations' tab selected. The interface displays three configuration panels for CAPs, each with a 'Channel' field highlighted in red:

Name	SSID	Hide SSID	Load Bal...	Country	Channel	Frequency	Band
CAPs Configuration <Both Bands>							
Wireless	Channel	Datapath	Security				
	Channel:						
	Frequency:						
	Width:	20					
	Band:	5ghz-a/n					
	Extension Channel:						
	Tx. Power:						
CAPs Configuration <5ghz Config>							
Wireless	Channel	Datapath	Security

CAPsMAN Antenna-gain

- Antenna-gain value is taken from the CAP interface
- Must be configured on AP before enable radio in CAP mode
- Example with 6db antenna-gain and 30db EIRP

The screenshot displays the CAPsMAN configuration interface. The top section shows a table of interfaces with columns for Name, Type, MTU, L2 MTU, and Tx. The interface 'cap1' is selected. Below this, the 'Wireless Tables' section shows a table with columns for Name, Type, L2 MTU, Tx, and Rx. A red box highlights the text: '--- managed by CAPsMAN' and '--- channel: 2442/20-Ce/gn(24dBm), SSID: LocalAP, CAPsMAN forwarding'. The bottom section shows the configuration for 'Interface <cap1>' with tabs for General, Wireless, Channel, Datapath, Security, Status, and Traffic. A red box highlights the 'Current Channel' field, which is set to '2442/20-Ce/gn(30dBm)'. Other fields include 'Current State: running-ap', 'Current Rate Set: CCK:1-11 OFDM:6-54 BW:1x-2x HT:0-15', and 'Current Basic Rate Set: OFDM:6 BW:1x HT:0-7'.
